

LEED Credit Contribution

Bonded Materials Company and LEED Projects

In an effort to unify green building standards, the U.S. Green Building Council (USGBC) created a ratings system for building projects called Leadership in Energy and Environmental Design (LEED). While building products cannot be LEED certified, they can contribute points to a LEED certified project. Bonded Materials Company is doing their part to support sustainable architecture and the growing awareness of LEED projects by providing locally manufactured products with low VOCs, which qualify for LEED credits. We offer single-source convenience with our complete line of premium products. The following information should be used as a guide in selecting products for installations that need to comply with LEED certification.

LEED Credits

Bonded Materials line of products can contribute to the following credits:

EQ 4.1 - Low Emitting Materials (Qualifies for 1 LEED point)

MR 4.1 - 10% Recycled Content (Qualifies for 1 LEED point)

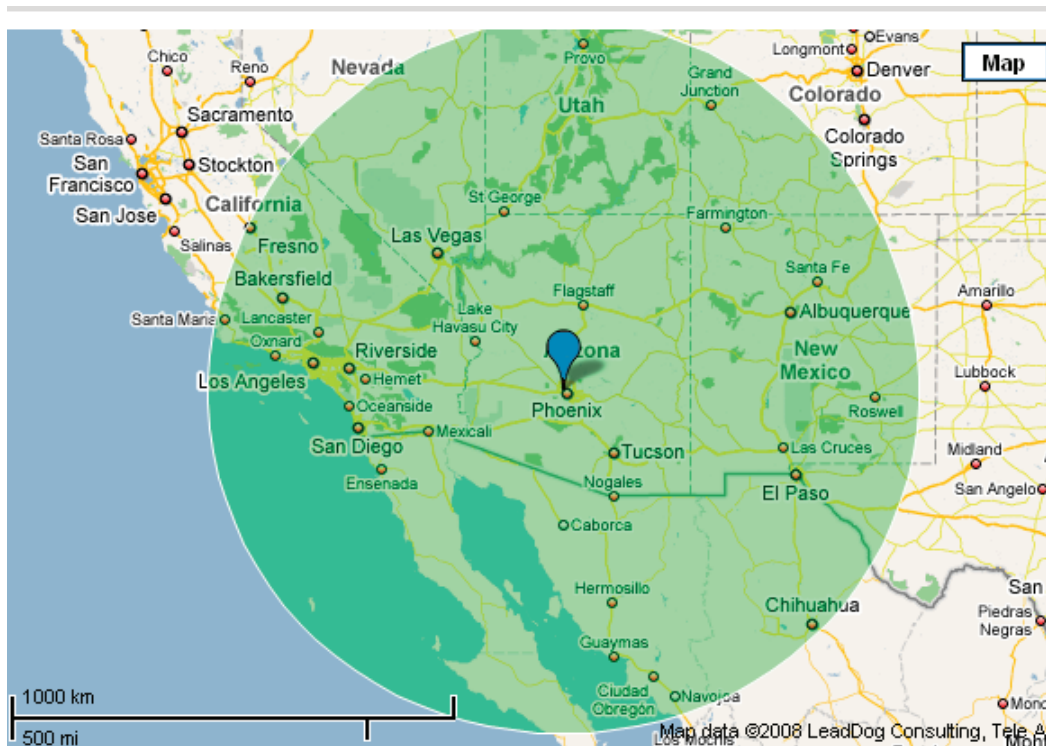

MR 4.2 - 20% Recycled Content (Qualifies for 1 LEED point)

MR 5.1 - 10% Locally Extracted Regional Materials and Locally Manufactured (Qualifies for 1 LEED point)

MR 5.2 - 20% Locally Extracted Regional Materials and Locally Manufactured (Qualifies for 1 LEED point)

Bonded Materials Company Products

The majority of our C-Cure by Bonded® and Pro-Line by Bonded® product lines are manufactured at our Phoenix, Arizona plant, located at 4330 N. 43rd Avenue, Phoenix, Arizona 85031. The attached product list should be used as a guide for projects within a 500 mile radius of the above-referenced location.
